

Introductory Chemistry (Allied Health Emphasis)-Chem 1406

Course Syllabus: Fall 2018

"Northeast Texas Community College exists to provide responsible, exemplary learning opportunities."

Bryan Trickey

Office: NA, online presence only.

Phone: 903.434.8292 (Jo Ann Rodriguez, Dept. Secretary)

Email: btrickey@ntcc.edu

Online Hours	Monday	Tuesday	Wednesday	Thursday	Friday	Online
(I check emails and monitor the class throughout the day, 7 days a week.)	6 PM-9 PM	Email me to arrange web or phone conference.				

The information contained in this syllabus is subject to change without notice. Students are expected to be aware of any additional course policies presented by the instructor during the course.

Catalog Course Description (include prerequisites):

A survey course designed to meet the needs of allied health majors. An introduction to the science of chemistry including scientific measurements, atoms and elements, compounds and their bonds, chemical reactions, energy, solutions, acids and bases, and gasses. Recommended as preparation for CHEM 1411. May not be substituted for CHEM 1411. 4 credit hours. Lecture/Lab/Clinical: The course is presented as an online course with the lecture, homework, and labs presented online using Blackboard.

Prerequisite: TSI complete

Required Textbook(s):

General, Organic, and Biological Chemistry by Frost and Deal, 3rd Ed.

Publisher: Pearson

ISBN Number: 9780134143705

Other Required Materials:

Introductory Chemistry Abbreviated Term Version 4: Kit #4604 from eScience Labs

Core Curriculum Purpose and Objectives:

Through the core curriculum, students will gain a foundation of knowledge of human cultures and the physical and natural world; develop principles of personal and social responsibility for living in a diverse world; and advance intellectual and practical skills that are essential for all learning. Courses in the foundation area of life and physical sciences focus on describing, explaining, and predicting natural phenomena using the scientific method. Courses involve the understanding of interactions among natural phenomena and the implications of scientific principles on the physical world and on human experiences.

College Student Learning Outcomes:

Critical Thinking Skills

CT.1

Students will demonstrate the ability to 1) analyze complex issues, 2) synthesize information, and 3) evaluate the logic, validity, and relevance of data.

Communication Skills

CS.1

Students will effectively develop, interpret and express ideas through written communication.

Empirical and Quantitative Skills

EQS.1

Students will manipulate numerical data or observable facts by organizing and converting relevant information into mathematical or empirical form.

EQS.2

Students will analyze numerical data or observable facts by processing information with correct calculations, explicit notations, and appropriate technology.

Team Work

TW2. Students will work with others to support and accomplish a shared goal.

Student Learning Outcomes:

- 1. Develop a familiarity with the metric system and demonstrate the ability to carry out conversion problems, including dosage, nutritional, and temperature conversions; and demonstrate an understanding of atomic theory, and be able to use the octet rule and VSEPR theory to predict chemical formulas and structures.
- 2. Be able to use simple chemical nomenclature, write and balance chemical equations, recognize reaction types and understand the factors that influence reaction rate.
- 3. Be able to work simple gas law problems; and gain an understanding of concepts associated with solutions such as electrolytes and nonelectrolytes, solubility and equivalents, and acids and bases.
- 4. Be able to distinguish organic and inorganic compounds, identify functional groups and distinguish and identify isomers.
- 5. Be able to understand the structure and metabolic activity of carbohydrates, lipids, proteins and nucleic acids.
- 6. Use basic apparatus and apply experimental methodologies used in the chemistry laboratory.
- 7. Demonstrate safe and proper handling of laboratory equipment and chemicals.
- 8. Conduct basic laboratory experiments with proper laboratory techniques.
- 9. Working in teams of two, demonstrate use of critical thinking and scientific problem-solving skills in the laboratory including the ability to carry out experiments in a safe and efficient manner. Laboratory reports will be used to test the ability of students to work in teams and to interpret and to communicate results effectively in writing.

Lecture:

This online course is meant to cover the same concepts and topics covered in the traditional face-to-face introductory chemistry course. The textbook and the online learning system called

"MasteringChemistry" are essential to this course. "MasteringChemistry' provides simulations, tutorials, visualization to key topics as well as practice to reach mastery through problems and questions.

The following schedule provides a brief outline of the scope and sequence of the course:

Week 1: Introduction, login to "Mastering Chemistry", introduction to lab safety and lab procedures.

- Week 2: Classification of matter, using math in chemistry, changes in chemistry, lab over using scientific method.
- Week 3: Atoms and isotopes, radioactivity, nuclear changes, lab over data analysis and graphing.
- Week 4: Electrons in atoms, octet rule, using the mole, covalent bonds and VSEPR.
- Week 5: Representing organic compounds, functional groups, nomenclature of organic compounds, isomers, periodic trends(lab).
- Week 6: Thermodynamics, kinetics, types of chemicals reactions, investigating atoms and atomic theory (lab).
- Week 7: Classes of carbohydrates, stereochemistry of monosaccharides, electron configuration and bonding(lab).
- Week 8: Chapter exam and midterm.
- Week 9: Spring break
- Week 10: Types of attractive forces, gas laws, liquids and solids, dietary lipids, valence shell electron pair repulsion(lab).
- Week 11: Factors affecting solutions formation, electrolytes, concentration, dilution osmosis and diffusion, chemical reactions(lab).
- Week 12: Identifying and naming acids and bases, equilibrium constants, weak acids/bases and ph.
- Week 13: Amino acids and protein formation, structure and function of proteins, enzymes, ideal gas law(lab).
- Week 14: Components and formation of nucleic acids, DNA, RNA and protein synthesis, acids/bases and the pH scale(lab).
- Week 15: Metabolism and nucleotides, digestion chemistry, citric acid cycle, electron transport and ATP production.
- Week 16: Review and Semester exam.

Evaluation/Grading Policy:

Evaluations will be based on homework utilizing MasteringChemistry, lab assignments conducted at home using the eScience lab pack, chapter exams and a comprehensive midterm and final exam.

The percent break down is as follows:

Mastering Chemistry assignments (homework)	25%
Chapter Exams	15%
Labs	20%
Midterm Exam	20%
Semester Exam	20%

A final grade for the course will be based on the following scale:

Grade	% of Total Points
A	90 to 100
В	80 to 89
C	70 to 79
D	60 to 69
F	0 to 59

Tests/Exams:

Chapter exams are taken online and at home using Blackboard. Blackboard is the course management site used by NTCC. Chapter exams will cover specific chapter. The midterm and final exams are proctored exams meaning students must take these exams at NTCC's test center. The testing center is

located on the main campus of NTCC in the Student Services Building. The hours of the testing center are: Monday—Thursday 8:00 a.m. to 6:00 p.m. and Friday 8:00 a.m. to 12:00 p.m. If a student does not reside in the NTCC service center they may choose to take these exams at another college test center. If you opt to use an alternate test center you will be required to contact the instructor with test center contact information including physical address, email, and a phone number. I will contact the test center to determine if it will be acceptable. Please be aware that it will be your responsibility to find this alternate test center and that they may charge a fee for this service. BioSig will provide your instructor with an independent report identifying the IP address of the computer and the internet provider of your proctored test. Proctored exams must be taken using the testing center's network. Mobile hot spots are not acceptable when taking the final exam.

Labs:

Lab is an integral part of the chemistry class. Computer based virtual labs are useful but they fail to provide the true hands on experience that comes with the traditional chemistry laboratory. To overcome this obstacle students will purchase and use a home lab pack for experiments. This lab pack from eScience Lab (Introductory Chemistry abbreviated term Ver 4 Kit 4606) adds some expense but it allows the student to complete all course requirement at home without physically meeting to complete lab work.

Homework:

Homework will be assigned and graded utilizing an online delivery system separate from blackboard called Mastering Chemistry. Homework assignments will target each section of all chapters that are covered. Students should read the appropriate sections of the textbook, view the *optional* MasteringChemistry simulations, tutorials, then attempt the *mandatory* MasteringChemistry questions. Each mandatory question set is made up of end-of-chapter questions that must be answered correctly to get credit. Students that do not correctly answer the minimum number of questions for mastery will have unlimited attempts. MasteringChemistry does randomize numbers for problems from one attempt to the next. The student's best grade will be recorded. Students will receive specific instructions on how to access MasteringChemistry from within blackboard.

Other Course Requirements:

Students will need a scientific calculator. This simply means that the calculator is capable of utilizing scientific notation. This does not have to be a graphing calculator. You will be required to use your calculator on the midterm and semester exams.

Student Responsibilities/Expectations/Deadlines:

This online course allows you the flexibility of completing assignments at a pace and location of your choosing. If you manage your time, work hard, utilize all available resources and ask questions in a timely manner you will be successful. This will not be the case if you procrastinate or try to fit a weeks worth of assignments into the final two hours before they are due. Due dates for each assignment, lab, exam will be posted within Blackboard. Due dates are necessary to ensure students to work on the course in a timely manner and to give the instructor time to review student work. You are choosing to take this online course which requires a computer and a dependable broadband internet connection however things happen. If you should have difficulty meeting a due date because of technical issues contact me about an extension. These technical difficulties should be rare. Numerous requests for extensions may not be honored. Assignments not completed by their due dates may result in a grade of zero for that assignment.

The last day to drop the course with a grade of W is **Tuesday**, **Nov 2**, **2018**. If circumstances require you to withdraw from this course, you must do so by that date. It is the **student's responsibility** to

initiate the withdrawal with the registrar's office. Failure to officially withdraw will result in your receiving a grade of F.

NTCC Academic Honesty Statement:

"Students are expected to complete course work in an honest manner, using their intellects and resources designated as allowable by the course instructor. Students are responsible for addressing questions about allowable resources with the course instructor. NTCC upholds the highest standards of academic integrity. This course will follow the NTCC Academic Honesty policy stated in the Student Handbook."

Academic Ethics

The college expects all students to engage in academic pursuits in a manner that is beyond reproach. Students are expected to maintain complete honesty and integrity in their academic pursuit. Academic dishonesty such as cheating, plagiarism, and collusion is unacceptable and may result in disciplinary action. Refer to the student handbook for more information on this subject.

ADA Statement:

It is the policy of NTCC to provide reasonable accommodations for qualified individuals who are students with disabilities. This College will adhere to all applicable federal, state, and local laws, regulations, and guidelines with respect to providing reasonable accommodations as required to afford equal educational opportunity. It is the student's responsibility to request accommodations. An appointment can be made with Shannin Garrett, Academic Advisor/Coordinator of Special Populations located in the College Connection. She can be reached at 903-434-8218. For more information and to obtain a copy of the Request for Accommodations, please refer to the NTCC website - Special Populations.

Family Educational Rights And Privacy Act (Ferpa):

The Family Educational Rights and Privacy Act (FERPA) is a federal law that protects the privacy of student education records. The law applies to all schools that receive funds under an applicable program of the U.S. Department of Education. FERPA gives parents certain rights with respect to their children's educational records. These rights transfer to the student when he or she attends a school beyond the high school level. Students to whom the rights have transferred are considered "eligible students." In essence, a parent has no legal right to obtain information concerning the child's college records without the written consent of the student. In compliance with FERPA, information classified as "directory information" may be released to the general public without the written consent of the student unless the student makes a request in writing. Directory information is defined as: the student's name, permanent address and/or local address, telephone listing, dates of attendance, most recent previous education institution attended, other information including major, field of study, degrees, awards received, and participation in officially recognized activities/sports.
